Shubh Ghiya

Bhopal, India · ghiyashubh23@gmail.com · github.com/morningstar0521 · linkedin.com/in/shubh-ghiya

Software engineering-focused CS + Data Science dual-degree student (IIT Madras, RGPV, 2027) who has shipped a live e-commerce platform with 100+ users and orders, and builds reliable backends (Node.js, PostgreSQL, Redis).

EDUCATION

Indian Institute of Technology Madras · B.S. Data Science & Applications · CGPA 8.49 / 10 — 2023 – 2027
University Institute of Technology, RGPV Bhopal · B.Tech. Computer Science & Engineering · CGPA 8.16 / 10 — 2023 – 2027

EXPERIENCE

Nakhrali Fashion (Nakhrali Luxury) · nakhraliluxury.com
Freelance Full Stack Developer — Feb 2026 – Present
Full Stack Developer Intern — Aug 2025 – Jan 2026

- Shipped a live e-commerce platform end to end (86 REST routes, 23 controllers, 30 pages, PostgreSQL with 37 migrations), serving 100+ registered users and 100+ daily visitors, with 100+ orders processed.
- Eliminated price tampering and duplicate charges by recomputing every cart from database prices on the server, verifying Razorpay payments with HMAC-SHA256, and serialising each payment with a Postgres advisory lock, row locks and unique indexes.
- Built and shipped a promotions engine (combo pricing, buy-X-get-Y, free gifts, cart thresholds) that prices in paise and freezes each checkout into an immutable, idempotency-keyed snapshot that payment verification and refunds trust.
- Migrated the backend from Render to a Hostinger VPS behind Nginx, PM2 and Cloudflare (Full-strict TLS, firewall open only to Cloudflare IPs), with GitHub Actions auto-deploy and a post-deploy health check.
- Fixed 12 of 13 findings from a security audit, including forced-logout, duplicate-order, SSRF and email HTML-injection bugs.

PROJECTS

Idempotent Event Processor · TypeScript, Node.js, PostgreSQL, Redis Streams, Docker, k6 · source

- Built a payment-event processor with zero lost events and zero duplicate effects across 6 Docker chaos scenarios, using a transactional outbox, Redis Streams consumer groups and database-enforced idempotency.
- Sustained 200 unique events/s for 90 s on 3 workers (18,000 of 18,000 processed) with 3.78 ms API p95 under duplicate-heavy k6 load, in local load tests.

QuickPark · Best Project Award, IIT Madras · Flask, Vue 3, Celery, Redis, Docker Compose, AWS EC2 · source

- Built and deployed a Flask + Vue 3 parking platform on AWS EC2 with 36 JWT-secured REST endpoints, role-based access and a 4-service Docker Compose stack (Caddy HTTPS, Gunicorn, Celery, Redis).
- Eliminated double booking with atomic compare-and-set updates and 2 partial unique indexes; a parallel test passes 15 of 15 checks in the production container, where the old code created 40 bookings on 1 spot.

README Intelligence · TypeScript, Next.js, pnpm monorepo, Vitest, Playwright · source

- Shipped a README analysis tool as a web app on Vercel, a published npm CLI (v0.1.4) and a reusable GitHub Action that fails pull requests only when they add new README contradictions.
- Measured extraction against 59 hand-labelled READMEs: 87.4% F1 on environment variables, 77.8% on commands, 69.8% on tech stack; 592 tests plus 10 Playwright end-to-end tests in CI.

ACHIEVEMENTS & LEADERSHIP

- **5th of 2,343** · Comment Category Prediction, Kaggle competition, IIT Madras (2026)
- **Best Project Award** · QuickPark, IIT Madras (2025)
- **Secretary, Synapse Society** · 1,600+ member student community, IIT Madras (2025 – 26)
- **Deputy Secretary, Kanha House** · 4,000+ students, IIT Madras. Led 12 Paradox'25 programmes; co-founded 3 communities (1,200+ members) (2024 – 25)

SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Backend	Node.js, Express, Flask, FastAPI, Celery, Zod
Databases	PostgreSQL, Redis, SQLite
Frontend	React, Next.js, Vue 3, Tailwind CSS
DevOps / Cloud	Docker Compose, GitHub Actions, Nginx, PM2, Cloudflare, AWS EC2, Vercel
Testing	Vitest, Playwright, pytest, k6
